

# GENERAL INFORMATION DISCLAIMER

*Surface Studio Tile & Stone Industry Blog Series*

---

The articles contained in this blog series are published by Surface Studio for general informational and educational purposes only. All content is provided in good faith as a guide to assist architects, interior designers, builders, and other building industry professionals in understanding tile and stone specification, installation, and performance considerations.

---

## 1. General Nature of Information

The information presented in these articles is intended to provide a broad overview of industry practices, standards, and considerations. It is not intended to constitute formal technical advice, engineering guidance, or a substitute for project-specific professional assessment. Every project is unique, and the suitability of any material, method, or standard referenced in this series must be assessed in the context of the specific conditions, requirements, and constraints of each individual project.

## 2. Standards and Regulatory References

References to Australian Standards (including AS 3958:2023, AS/NZS 4586:2013, AS ISO 13006, AS ISO 13007, AS 3740:2021, and others), the National Construction Code (NCC), and associated Handbooks (including HB 197 and HB 198) are provided for general reference and context only. Standards are subject to revision, amendment, and reissue by Standards Australia and other relevant bodies. Readers should always:

- Obtain and refer to the current edition of any standard referenced before making specification or design decisions
- Confirm that the version cited remains current at the time of use
- Consult the full text of the relevant standard rather than relying solely on the summary descriptions provided in these articles

Surface Studio accepts no responsibility for any errors, omissions, or outdated information arising from changes to standards, codes, or regulations occurring after the date of publication of any article in this series.

## 3. No Substitute for Professional Advice

The content of these articles does not constitute and should not be relied upon as professional engineering, architectural, structural, legal, or compliance advice. Decisions regarding material specification, installation methodology, structural adequacy, waterproofing design, slip resistance compliance, or any other technical matter should always be made in consultation with suitably qualified and licensed professionals, including but not limited to:

- Licensed architects or building designers
- Structural or civil engineers

- Licensed building certifiers or surveyors
- Licensed tiling contractors with relevant experience in the application type
- Adhesive and waterproofing system technical representatives

Surface Studio strongly recommends that all specification decisions be reviewed by the appropriate professional prior to implementation.

#### **4. Product and Supplier References**

Where specific products, suppliers, manufacturers, or industry bodies are referenced in these articles, such references are provided as examples for illustrative purposes only and do not constitute an endorsement, recommendation, or warranty of any product or organisation. Surface Studio makes no representation regarding the fitness for purpose, compliance status, or ongoing availability of any third-party product referenced in this series.

Product performance data, including slip resistance classifications, water absorption ratings, PEI ratings, and breaking strength values, vary between products and manufacturers. All technical data should be confirmed against the current manufacturer's technical data sheet and relevant test certificates for the specific product under consideration.

#### **5. Limitation of Liability**

To the maximum extent permitted by applicable Australian law, Surface Studio, its directors, employees, and agents expressly disclaim all liability for any loss, damage, cost, or expense (whether direct, indirect, consequential, or otherwise) arising from reliance on the information contained in these articles, including but not limited to:

- Installation failures, defects, or non-compliance arising from specifications based on this content
- Errors or omissions in the information provided
- Changes to standards, codes, or regulations after the date of publication
- The unsuitability of any referenced product or method for a specific project application

#### **6. Currency of Information**

The articles in this series reflect the authors' understanding of industry practice, Australian Standards, and the National Construction Code as at the date of publication. The tile and stone industry, and the standards that govern it, continue to evolve. Surface Studio endeavours to keep its published content current but does not guarantee that all information remains accurate or up to date at any given time. Readers are encouraged to contact Surface Studio directly for current product and technical guidance specific to their project.
